

Quality and Environmental Policy

Swedish Hydro Solutions enables sustainable change through high-quality and environmentally responsible solutions for water treatment.

Our daily work is based on clear ways of working, risk awareness, and a strong commitment to continuous improvement. We foster an environment that promotes a quality-driven culture, and through open communication, a high level of service, and a professional approach, we aim to be a reliable partner – in every project, every day.

We also take clear responsibility for the environment. This means preventing pollution, minimizing negative impact on nature, and using resources with care. Each year, we identify our significant environmental aspects as a basis for our priorities, objectives, and improvements. We actively work to manage chemicals and waste safely, select solutions with low environmental impact, and reduce the impact from energy use, transport, and the supply chain.

Swedish Hydro Solutions complies with all applicable laws, regulations, and other binding requirements relevant to our operations. All employees play an important role in this work – we build quality, safety, and sustainability together through competence, commitment, and responsibility in our daily work.

We continuously develop our processes, methods, and environmental performance through systematic follow-up, risk management, internal audits, and the use of experience feedback. The policy is an integral part of our management system and a foundation of our “PURE Commitment.”

Swedish Hydro Solutions shall always combine high quality with low environmental impact – for our customers, our operations, and a sustainable future.

Alingsås, 2026-03-13

Margaretha Rhodin, CEO, Swedish Hydro Solutions
